FOREWORD

This publication contains information pertaining to the sectional traffic volumes and accident rates on roads under Provincial jurisdiction as of December 31, 1983. Such roads include:

- King's Highways;
- Secondary Highways; and
- Tertiary Roads.

The book is divided into two parts:

Part I -- includes a detailed listing of the above information, section by section; and

Part II -- includes summary information of "Travel Experience" expressed in millions of vehicle-kilometres (Mv•Km), "Accident Data", and other system volume indicators across the Province.

PART I:

The highway network is divided into 2,667 sections for reporting purposes. The estimated traffic for different time periods are reported for each section listed. Although local conditions may cause variation in the volume within the sections, the volumes shown are still considered as adequately representative of that section.

Roads possessing more than one route number (i.e., 35/115) are referenced to the lower number. When an overlap occurs between a freeway and a non-freeway reference is made to the freeway route number (i.e., Q.E.W., 400 to 427).

Following is the KEY to reading the listings:

Heading	Description
LOCATION DESCRIPTION	A statement identifying the start or ending of a section. Frequent abbreviations used (over the commonly known) include: IC : interchange JCT : junction LTS : limits BDY / BDRY : boundary TWP : township CORS : corners REG : regional BR : bridge C : concessions CTY : county L : lot R : river
DIST (KM)	The length of the section in kilometres reported to one decimal place.
PATT TYPE	One of 14 pattern types that represent the seasonal variability of the traffic flow on the section indicated. The 14 pattern types represent the traffic flow variation on the whole network. They include: 1. UC : urban commuter 2. SC : suburban commuter 3. C : commuter

Heading	Description
PATT TYPE (cont'd)	

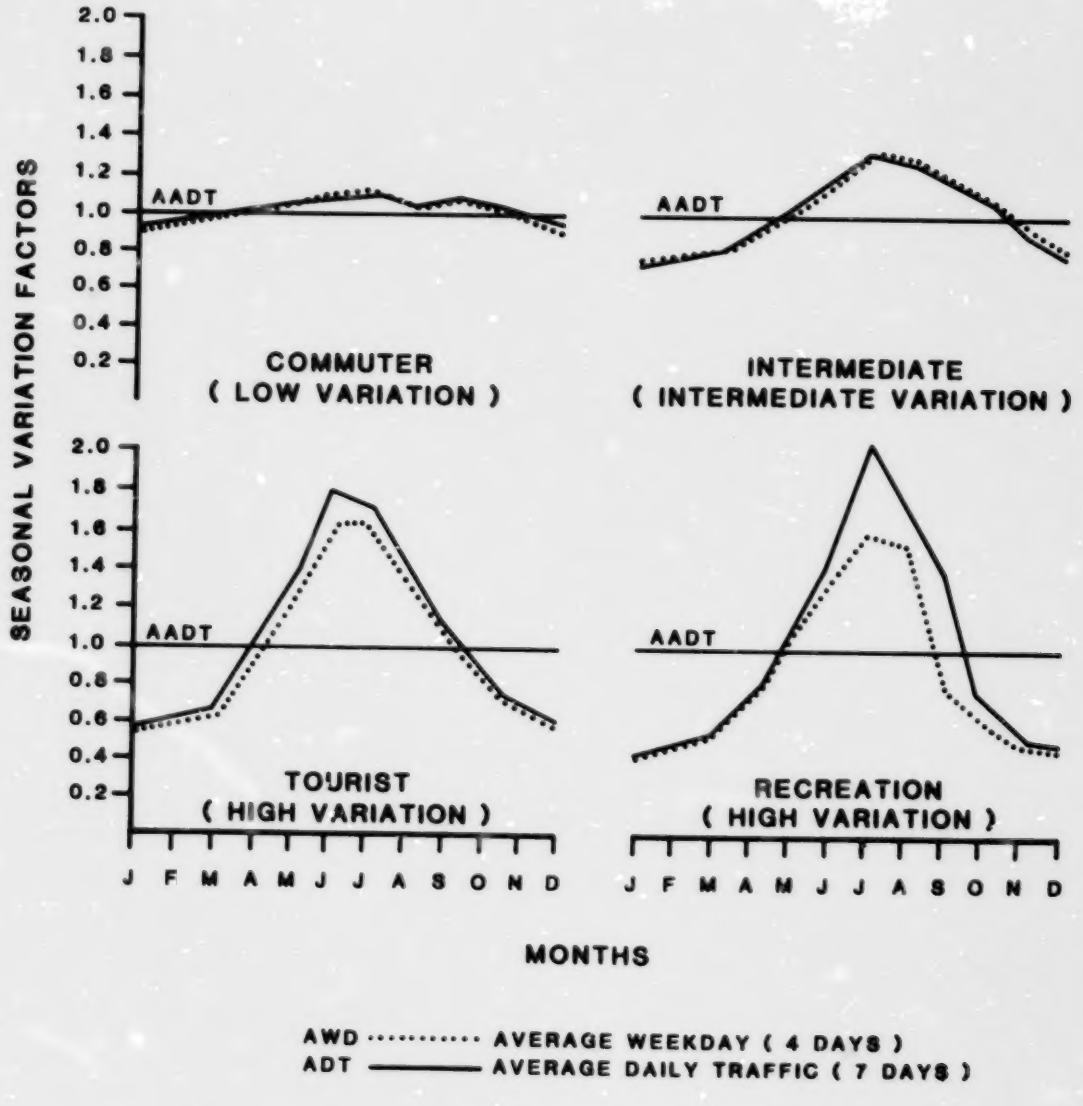
4. IC : intermediate commuter
5. CR : commuter recreation
6. IR : intermediate recreation
7. CTR : commuter - tourist - recreation
8. IT : intermediate tourist

9. LT : low tourist
10. T : tourist
11. HT : high tourist
12. LR : low recreation
13. R : recreation
14. HR : high recreation

The first three are generally referred to as Low Variation Curves (or Commuter Traffic); the next five as Intermediate Variation Curves (a blend of all types of traffic); and the last six as High Variation Curves. For this last group, the first three represent tourist travel and the second three, recreational travel; this sub-grouping is distinguished by the relationship of weekend to weekday traffic.

A graphical presentation of these pattern types has been included on the following page.

1983 SEASONAL VARIATION CURVES



Heading	Description
AADT	Annual Average Daily Traffic; which is defined as the average twenty-four hour, two-way traffic for the period, January 1st to December 31st.
SADT	Summer Average Daily Traffic; which is defined as the average twenty-four hour, two-way traffic for the period, July 1st to August 31st, including weekends.
SAWDT	Summer Average Weekday Daily Traffic; which is defined as the average twenty-four hour, two-way, weekday traffic for the period, July 1st to August 31st, excluding weekends. Weekend traffic is defined to start at noon on Friday and end at noon on Monday for a normal short weekend. A long holiday weekend would have an additional day either commencing at noon on the Thursday or ending at noon on the Tuesday, depending on whether the holiday falls on the Friday or the Monday.
WADT	Winter Average Daily Traffic; which is defined as the average twenty-four hour, two-way traffic for the period, December 1st to March 31st, including weekends.

Heading	Description
AR	Accident Rate; which is defined as the number of reportable accidents occurring annually on a particular highway section for every million vehicle kilometres (Mv•km) travelled on that section during the same period. "Reportable Accidents" are those causing any death, injury or damage exceeding a certain established limit. For example, in 1978, the damage limit was increased from $200 to $400. Mathematically, the accident rate is calculated as follows: AR = Number of accidents for a given year / Mv•km, noting the following: a. multiple vehicle collisions (i.e., chain reactions are generally considered as one accident unless the reporting police officer decides otherwise. b. accidents on freeway ramps are totally excluded from sectional and total system accident rate calculations. c. the Mv•km is calculated as follows: $$\text{Mv•Km} = \frac{\text{AADT} \times 365 \text{ days} \times \text{DIST (km)}}{1{,}000{,}000}$$ If no accidents have occurred on a given section, the accident rate is shown as blank, not zero.

CAVEATS

The user of this publication should realize that the reported data are 'estimated values' and not 'direct measurements' from the field, although some are, indispensably. In fact, less than one-third of the reported sections are measured annually. Such measurement is carried out via three schemes:

1. Permanent Counting Stations at nineteen sites across the Province. Counts are kept 24 hours a day, 365 days a year.

2. Inventory Counting Stations at select locations, based on a set of rational criterial, on a cyclical basis as follows:

   - Three MTC regions cover the counting of their system over 3 years; one, over 4 years; and one, over 5 years.
   - Within each region, some links are counted once per cycle and others, twice per cycle.
   - Each counting can comprise of one, two or three observations. One observation is equivalent to a 24 hour day.

3. Request Counting Stations at random locations as needed.

Using the above information, the historical files and probabilistic models, estimates for the non-counted sections (over two-thirds) are made.

PART II:

The information in this part is included for the purpose of policy analysis and program planning. It includes summaries about the overall system and not any specifics related to any of the sections.

In particular, it includes the following:

1. Highway Distance (km) by Classification.

2. Number of Sections in the Highway System.

3. Summary of Highway Distance (km) by Volume Range and Traffic Variation.

4. Maximum AADT experienced by type of variation and highway width (in lanes).

5. Distance (km) by Highway Type and Highway Width (in lanes).

6. Highway Distance (in km) by variation type and highway width (in lanes).

7. Historical Trend of Travel Experience (Mv•Km).

8. Historical Trend of Accident Rates.

9. Summary of Travel Experience (Mv•km) and Accident Data.

1. HIGHWAY DISTANCE (km) BY CLASSIFICATION

Clasification	Length	% of Total
Freeways	1,495.0	7.0
King's Highways	14,332.6	67.1
Secondary Highways	5,332.9	24.9
Tertiary Roads	214.2	1.0
TOTALS	**21,374.7**	**100.0**

2. NUMBER OF SECTIONS IN HIGHWAY SYSTEM

Item	Value	Remarks
Total Sections listed in "Book"	2,667	As seen in the Traffic Volume Book.
"Potential" sections for counting program	2,329	The difference being induced by political and jurisdictional boundaries and by highway geometric design.
Number of sections counted in 1983 (excluding those below)	596	The rest are calculated using historic information, laws of probability and mathematical models.
Number of sections derived from Ramp Counts	68	Based on 397 Ramp Counts.

NOTE: 1. All reported Freeway ramp accidents have been excluded.
2. Hwys. overall include Tertiary roads.
3. Mv·km is million vehicle kilometres of travel.
4. Mv·km for Provincial Total & Other Roads is based on total taxed gasoline & motor fuel sales and average vehicle fuel consumption (1983 = 20.5ℓ / 100 km)
5. Mv·km for Hwys. Overall (and components) is based on estimated traffic volumes and reported section lengths.
6. RATE is the number of accidents per million vehicle kilometres of travel (Mv·km).
